

GRANDER®: GREAT SWIMMING FUN IN YOUR GARDEN

Cleaning your pool or pond the easy way with GRANDER® water revitalization

High-quality pool water can be achieved by consistently combining the following factors: the ideal pool set-up, regular metrological check-ups, upkeep, maintenance, and the use of GRANDER® water revitalization. GRANDER® water revitalization improves the water's inner structure, optimizes its chemical composition (less disinfectants and chemical agents required, easier cleaning), and enhances your wellness experience while bathing.

Maximum wellness, minimum effort

Pools require a lot of upkeep, especially if they are equipped with gadgets like counter-current and whirlpool systems. GRANDER® Inline Units naturally stabilize water in pools. This way, the use of chemical agents and, as a result, the smell of chlorine can be reduced drastically. What is more, cleaning your pool becomes significantly easier, and the water will be pleasant to your eyes, skin, and hair.

Natural ponds in your garden

Natural pools and ponds are small, fragile ecosystems that strongly depend on the stability of their microbiological setup. GRANDER® can help keep this delicate equilibrium by contributing to the self-cleaning process and the biological balance of your pond. Even the plants around the pond benefit from using GRANDER® revitalized water: they become more resilient to environmental influences and grow faster. Users in Austria and abroad report that revitalized water also improves the health of fish and other organisms living in the pond. By using GRANDER® revitalized water, sludge and algae on the pond's bottom naturally disappear, making the water clear again.

GRANDER® PRESS INFORMATION PRIVATE POOLS & PONDS

Using GRANDER® revitalized water in swimming pools as well as natural pools and ponds offers the following benefits:

- Pleasant bathing experience through palpably soft water
- Reduced use of chlorine and chemicals
- Minimized chlorine smell in swimming pools
- Low cleaning efforts
- Pleasant feeling to eyes and skin
- Vitalizing effects resulting in a delightful bathing experience
- Support of the natural self-cleaning process of pond water
- Promotion and long-term maintenance of a biological balance in ponds
